## Preparation of unit Doses in the Hospitals : The solution for PET & SPECT !

The Injection Set protects the medical staff and allows the complete transfer of the activity to the patient.

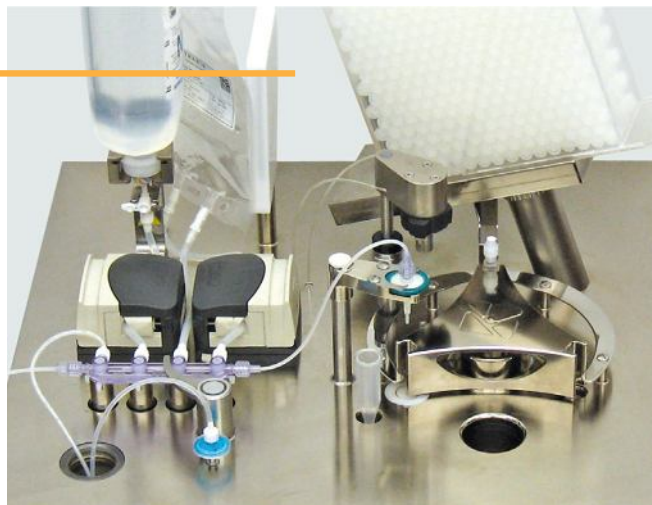

## Use your activity to the last drop

---

From a multi-dose vial, prepare your patient doses on the fly, accurately with all markings and complete traceability... to the last drop of the available solution.

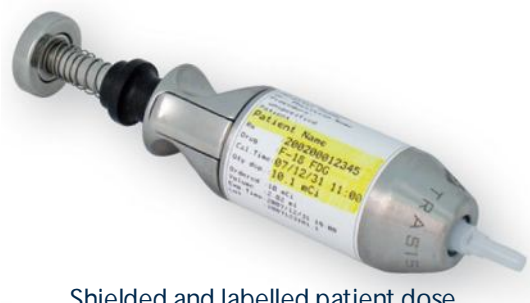

The same dispenser will allow the preparation of different compounds.

Automated dispensing of the patient doses

## Inject safely

---

Shielded and labelled patient dose

The doses remain shielded at all times, even while measuring them.

You keep the feeling and the control needed for delicate injections.

The sterilised Injection Set makes rinsing easier than ever.

## Safe and commonly accepted practice

---

The preparation of the patient doses, separated from their injection, makes any cross contamination impossible.

The environment and the traceability are in line with the standards of the pharmaceutical industry.

The Injection Set allows injecting and rinsing the syringe and the line.

## Radiopharmacy instrumentation specialists

---

Trasis, specialised in professional and innovative solutions for the radiopharmaceutical industry, also invests in nuclear medicine's future, through the development and implementation of miniaturised radiolabelling technology.
